

Optimal algorithm to extract tree CC(T) polynomial

NO

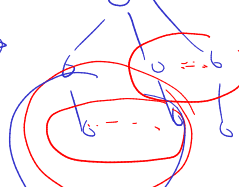

$$\deg T = \max_V \deg V = 2$$

min deg T

max max

- ① min max deg $T \rightarrow$  Hounded
- ② CC
- $C(T)$
- $C(T, 0)$

- ① heuristic to build the optimal tree (minmaxdeg) ~~local complement.~~ ← Carroll
- ② greedy algorithm to add the heralded one.
